Synoptic Monthly Gridded and Ocean Modeled Data to Assess Submarine Vulnerability

Chu, Peter C.

Monterey, California. Naval Postgraduate School

<http://hdl.handle.net/10945/58467>

This publication is a work of the U.S. Government as defined in Title 17, United States Code, Section 101. Copyright protection is not available for this work in the United States.

Downloaded from NPS Archive: Calhoun

Calhoun is the Naval Postgraduate School's public access digital repository for research materials and institutional publications created by the NPS community. Calhoun is named for Professor of Mathematics Guy K. Calhoun, NPS's first appointed -- and published -- scholarly author.

Synoptic monthly gridded and ocean modeled data to assess submarine vulnerability

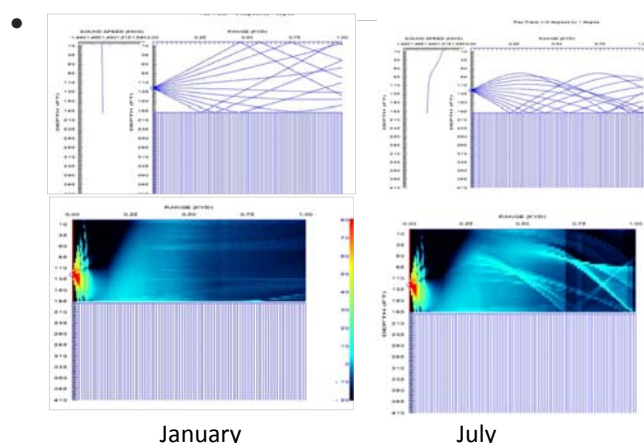

Naval
Postgraduate
School

Topic Description

- Understanding the ocean environment is imperative and directly coupled to the successful performance of undersea sensors and subsequent employment of undersea warfare weapon systems.
- In order to optimize the performance of undersea sensors and weapons systems, it is crucial to gain an understanding of the acoustic propagation in the ocean.

ASW success foundation

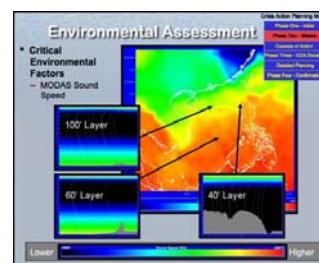

Seasonal Variability in Signal Excess (SE) from GDEM in the Yellow Sea

Difference in Acoustical Characteristics Identified from the Three Datasets in the Navy's Hot Spots

- Climatology → Navy's Generalized Digital Environmental Model (GDEM)
- Synoptic Monthly Gridded (T, S) fields for the world oceans from January 1960 to December 2015 → Synoptic GDEM (developed at NPS).
- Navy's Coastal Ocean Model (NCOM) and Hybrid Coordinate Ocean Model (HYCOM)

Potential Research Focus/Questions

- How can inter- and intra-annual variability in the ocean be leveraged by the submarine Force?
- Is GDEM or synoptic GDEM good enough to represent SVP for ASW especially in the bottom limited area?
- What is value-added of HYCOM/NCOM modeled (T, S) profiles to represent SVP for ASW?
- How can ocean models (e.g., NCOM or HYCOM) be used for submarine operations?

3dB Variability in Signal Excess → ASW

Environment assessment with three datasets for submarine vulnerability

Students Involvement and Collaboration

- NPS USN student officers will be recruited to work on this proposed research topic for their thesis studies.

This project will be conducted in collaboration closely among NPS (Dr. Peter C. Chu), NAVO (Mr. Ronald Betsch, ASW/MIW program manager, Mr. Mel Wagstaff, ASW Technical Leader), and NRL (Dr. Charles Barron)

Researcher Name (Distinguished Professor Peter Chu)
NPS School (GSEAS)

Topic Sponsor Organization (OPNAV – N97)
